Cargologistics tariff 2023

The rate zone of the item is in the intersection of the sender's and recipient's postal codes.
The effective freight rate can be found in the adjacent table with tariff zone and shipment weight.

Calculation tariff weight

The basis of the price calculation is the tariff weight of the individual transport units. The tariff weight results from the higher value of the comparison of the volume weight and the effective gross weight of the individual transport units (incl. pallet and packaging). The volume weight calculation is as follows:

Stackable goods	1 m^3 = 250 kg
Non-stackable goods	1 m^2 = 500 kg
Loading meter (lm)	1 lm = 1200 kg

When shipping SBB / EURO pallets, frames and lids, the following volume weight regulation applies (max. base area 1.2 x 0.8 m/ without overhang):

Euro I: total height	< 60 cm, min. 125 kg volumetric weight
Euro II: total height	61 – 100 cm, min. 250 kg volumetric weight
Euro III: total height	> 100 cm, min. 400 kg volumetric weight
